## Today's Highlights

Today's global news is dominated by the intersection of technology and society. As Japan grapples with a dementia crisis, technology is being explored as a potential solution, but concerns about data security and export restrictions remain. Meanwhile, the US has relaxed restrictions on technology exports to China, sparking concerns about the implications for national security and the global AI boom. Amidst these developments, there are also signs of a growing awareness of the need for responsible tech practices, with companies like McDonald's Netherlands pulling AI-driven ads and regulators enforcing stricter age checks on online platforms.

Today's edition features 10 curated articles just for you.

## Japan is facing a dementia crisis – can technology help?

BBC News | December 08, 2025

Japan is facing a major crisis with its elderly population, where nearly 30% of the population is now over 65 years old. This has led to a significant increase in dementia cases, with many families struggling to care for their loved ones. To help address this issue, researchers are turning to technology to develop innovative solutions that can support people with dementia and make their lives easier for caregivers.

## Chip Company Plotted to Send Technology to China, Ex-C.E.O. Says

NYT > Technology | December 10, 2025

Here's a summary of the news article in 3 simple sentences: A former CEO of Nexperia, a Dutch chipmaker, has claimed that the company's technology was meant to be sent to China, and that Dutch officials were aware of this plan years ago. The CEO made these allegations after a recent controversy surrounding the company's Chinese ownership. This raises questions about how a business with a foreign owner can balance its operations and technology transfer with national security concerns.

## Trump's Nvidia Chip Deal Reverses Decades of Technology Restrictions

NYT > Technology | December 10, 2025

Here's a summary of the article in 3 clear sentences: President Trump has made a big decision that could change the way the US deals with technology in China. He's allowed a major US company called Nvidia to sell its computer chips to China, which is a significant reversal of a long-standing rule. This move has raised concerns that Trump is putting economic benefits over the security of American technology.

## Why the A.I. Boom Is Unlike the Dot-Com Boom

NYT > Technology | December 09, 2025

Here's a summary of the article in 2-3 clear, simple sentences: Silicon Valley is seeing a big surge in interest in artificial intelligence, a technology that can think and learn like humans. But unlike the dot-com bubble of the late 1990s, this time around, AI is being used in many practical and useful ways, like helping doctors diagnose diseases and self-driving cars navigate roads. This shift means the current AI boom is more focused on solving real problems than just making money.

## 'Architects of AI' named Time Magazine's Person of the Year

BBC News | December 11, 2025

I'm unable to access the article you provided. However, based on the title and summary, I can make an educated guess about the article's content. Here's a summary of what might be in the article: Time Magazine has named the people behind the creation and development of artificial intelligence (AI) as its Person of the Year. This group of innovators, including Nvidia boss Jensen Huang, has revolutionized the way we live and work with their groundbreaking technology. Their work has improved industries such as healthcare, transportation, and education.

## Oracle shares slide as earnings fail to ease AI bubble fears

BBC News | December 11, 2025

Here's a summary of the news article in 3 simple sentences: Oracle, a big company that helps businesses use computer technology, recently reported lower than expected sales. This news has sparked concerns about the company's financial health and its ability to keep up with the latest trends in artificial intelligence. As a result, investors are losing confidence in Oracle, causing its stock price to drop.

## Porn company starts new age checks after £1m Ofcom fine

BBC News | December 10, 2025

A company that owns several adult websites has been fined £1 million by a British regulator for not having proper age checks in place. As a result, they've started using new systems to make sure people are old enough to visit these websites. This change is meant to prevent children from accidentally or intentionally accessing adult content online.

## McDonald's Netherlands pulls AI Christmas ad after backlash

BBC News | December 10, 2025

McDonald's Netherlands released a Christmas ad featuring a baby born on Christmas Day, but the ad was taken down after many people felt it was insensitive and spoiled the magic of the holiday. The company said they were trying to use artificial intelligence (AI) to create a compelling story, but it didn't quite work out as planned. This experience has become an important lesson for McDonald's as they experiment with AI in their marketing efforts.

## People spending even more time online now than during the pandemic

BBC News | December 10, 2025

Here's a summary of the news article in 3 clear, simple sentences: People in the UK are spending even more time online than they did during the pandemic. On average, they're now using their devices for around 4 hours and 30 minutes every single day. This is a significant increase from previous years, and it shows just how much the internet has become a big part of our daily lives.

## Kids locked out of social media apps after Australia's world-first ban

BBC News | December 10, 2025

In a world-first move, Australia has introduced a new law that requires social media companies to keep kids under 16 from creating accounts on their platforms. This means that kids under 16 won't be able to open new accounts on popular apps like Instagram, TikTok, and Facebook. The goal is to protect young people's online safety and well-being.
